EDUCATION

Texas A&M University

College Station, TX

B.S. in Computer Science, Minor in Mathematics

May 2027

- **Relevant Coursework:** Machine Learning, Operating Systems, Computer Systems, Parallel Computing, Cloud Computing, Distributed Systems, Competitive Programming, Analysis of Algorithms

EXPERIENCE

Software Engineer Intern

May 2026

Dropbox | React Native, Node.js, AWS, Python

San Francisco, CA

- Architecting full-stack internal applications leveraging Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) to accelerate employee workflows and knowledge discovery
- Collaborating directly with the Director of Learning Design and technical leadership to prototype, test, and deploy AI-driven educational tools across the organization's internal infrastructure

ML Undergraduate Research Assistant

Feb 2026

Texas A&M University – STMI Lab | PyTorch

- Developed deep learning time-series forecasting models to predict continuous cardiovascular waveforms (ECG/PPG) from wearable sensor data, targeting the early detection of adverse physiological events
- Architected Natural Language Processing (NLP) pipelines to synthesize unstructured electronic health records (EHR) into concise, actionable clinical summaries, significantly reducing cognitive load for physicians

Software Engineer Intern

June 2025 – September 2025

LegacAI | JavaScript, TypeScript, React, Node.js, AWS, Whisper, Agile

Remote

- Engineered and deployed a full-stack AI note-taking platform using React, Node.js, and OpenAI Whisper, reducing meeting documentation time by 30% and increasing beta user engagement by 25%
- Architected secure authentication with Google OAuth and AWS Cognito, designing a DynamoDB schema for role-based access control that achieved 99.99% uptime

PROJECTS

VoxPath ([GitHub](#)) | C++17, ONNX Runtime, FFTW, AVX2, Systems Design, React, WebAssembly

2025

- Designed neural network model to categorize vocal biomarkers for early detection of Parkinson's disease and other health disorders
- Engineered a high-performance C++ inference runtime for real-time vocal pathology detection, embedding ONNX Runtime to execute quantized PyTorch models directly, removing Global Interpreter Lock (GIL)
- Developed feature extraction pipeline for vocal biomarkers (Jitter/Shimmer), utilizing raw PCM streaming and windowed FFT algorithms to process audio data

Nagi - tamuhack ([DevPost](#)) | Next.js, TypeScript, Tailwind, Nemotron API, React, Figma

2026

- Built a user interface that converts natural language queries and file uploads into Python programs and Slurm job specifications for high-performance computing (HPC)
- Architected an agentic pipeline with 12+ discrete tools orchestrated by NVIDIA Nemotron, implementing robust JSON parsing and error handling to manage LLM output truncation across the workflow

JP Morgan DataForGood Hackathon (Winner) | Python, Pandas, Logistic Regression, Data Analysis

2025

- Partnered with NGO to analyze domestic violence survivor program data, identifying a critical service gap affecting adolescent children (ages 12-18) excluded from both childcare and adult workforce programs
- Built a logistic regression model using Python and scikit-learn to predict employment outcomes based on certification completion, achieving meaningful insights into program effectiveness

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, HTML/CSS, C/C++, Swift, SQL, MATLAB

Frameworks: React.js, Next.js, React Native, Django, Flask, Spring Boot, Tailwind CSS, TensorFlow, Keras

Developer Tools: Git, GitHub, VS Code, PyCharm, IntelliJ, AWS, Google Cloud, Firebase, Bash, Linux, DevOps
